ASSIGNMENT 6

Textbook Assignment: "Indicators," chapter 5, pages 5-1 through 5-27.

- 6-1. Which of the following systems supply information displayed on the HSIs and BDHIs?
 - 1. Communication systems
 - 2. Radar systems only
 - 3. Navigation systems only
 - 4. Radar/navigation systems
- 6-2. In the HSI group, which, if any, of the following components are interchangeable between the pilot's, copilot's, and NAV/COMM's station?
 - 1. HSI group controls only
 - 2. HSI group indicators only
 - HSI group controls and indicators
 - 4. None of the above
- 6-3. On the ID-1540/A horizontal situation indicator, what is the reference line for reading the aircraft's heading on the compass card?
 - 1. The lubber line
 - 2. The bearing line
 - 3. The marker line
 - 4. The range line

IN ANSWERING QUESTIONS 6-4 THROUGH 6-8, SELECT FROM COLUMN B THE FUNCTION OF THE HSI ITEMS LISTED IN COLUMN A. SOME ITEMS IN COLUMN B WILL BE USED MORE THAN ONCE.

	A. HSI ITEMS	В.	FUNCTIONS
6-4.	Bearing pointer No. 1	1.	Indicates the lubber line
6-5.	COURSE indicator	2.	Points to the bearing of the selected navigational point
6-6.	To-From indicator		
6-7.	Bearing pointer No. 2	3.	Displays the course arrow setting in a digital readout in degrees
6-8.	Aircraft symbol		
		4.	Indicates whether the selected course is going toward or away from the selected beacon station

- 6-9. What component controls the inputs to the pilot's HSI?
 - 1. A208
 - 2. A279
 - 3. A280
 - 4. A309

- pilot's HSI control selects which of the following heading signal sources for display on the HSI compass card?
 - 1. INS-1 and INS-2
 - 2. INS-1 and STBY GYRO
 - 3. INS-2 and STBY GYRO
 - 4. Vertical gyro and STBY GYRO
- 6-11. On the pilot's HSI control, the ATTD selector controls which of the following sources of attitude signals for the pilot's FDI sphere?
 - 1. INS-1 and INS-2
 - 2. INS-1 and STBY GYRO
 - 3. INS-2 and STBY GYRO
 - 4. Vertical gyro and STBY GYRO
- 6-12. On the pilot's HSI control, with HSI-FDI selector switch must be in what position to receive signals from the central computer?
 - 1. TACAN
 - 2. VOR-1/ILS
 - 3. VOR-2
 - 4. TAC NAV
- of the bearing signal displayed on the bearing pointer 1 on which of the following HSIs?
 - 1. Pilot's, copilot's, and TACCO's
 - 2. Pilot's, NAv/COMM'S, and TACCO's
 - 3. Copilot's, NAV/COMM'S, and TACCO's
 - 4. Pilot's, copilot's, and NAV/COMM's
- 6-14. On the copilot's HSI control, the ATTD selector controls which of the following sources of attitude signals for the copilot's FDI sphere?
 - 1. INS-1 and INS-2
 - 2. INS-1 and STBY GYRO
 - 3. INS-2 and STBY GYRO
 - 4. Vertical gyro and STBY GYRO

- 6-10. The HDG selector switch on the 6-15. The BRG 2 switch on the copilot's HSI control selects the source of the bearing signal displayed on the bearing pointer 2 on which of the following HSIs?
 - 1. Pilot's and copilot's
 - 2. Copilot's and NAV/COMM's
 - 3. Copilot's and TACCO's
 - 4. TACCO's and NAV/COMM's
 - 6-16. When there is a failure with the heading function in the central repeater system, what indicator illuminates on the NAV/COMM HSI control?
 - 1. DIST NO-GO
 - 2. ATTD BEARING NO-GO
 - 3. INS NO-GO
 - 4. HEADING NO-GO
 - the BRG 1 switch in DA, the COURSE 6-17. Which of the following signals are selected for display on the NAV/COMM HSI by the NAV/COMM HDG switch?
 - 1. MAG and TRUE heading signals
 - 2. INS-1 and INS-2 heading signals
 - 3. INS-1 and MAG heading signals
 - 4. INS-2 and TRUE heading signals
 - The BRG 1 switch selects the source 6-18. What indication appears on the HSI with VOR-1 selected if the input signal from VOR-1 becomes unreliable?
 - 1. VOR-1 NO-Go
 - 2. NAV NO-GO
 - 3. VOR-1 flag
 - 4. NAV flag
 - 6-19. What signal will be supplied to the HSI by the UHF-DF/OPTI and the ADF systems when either is selected?
 - 1. Bearing signal
 - 2. To-From signal
 - 3. Course deviation signal
 - 4. NAV flag signal

- 6-20. On the HSI, when a tactical mode is selected, true heading information is switched out of the circuit, and the compass card will be driven by magnetic heading information.
 - 1. True
 - 2. False
- 6-21. What is/are the quantity of pointers on a BDHI?
 - 1. One
 - 2. Two
 - Three
 - 4. Four
- 6-22. From what reference is the BDHI 6-28. compass card read for aircraft heading?
 - 1. Pointer No. 1
 - 2. Pointer No. 2
 - 3. Lubber index
 - 4. Lubber line
- 6-23. The BDNI distance counter consists of how many total synchro torque receivers to position the numerals?
 - 1. Five
 - 2. Two
 - 3. Three
 - 4. Four
- 6-24. The visual display system used by aircrew to search for, attack, and destroy the enemy is commonly called the
 - 1. MDS
 - 2. PDS
 - 3. SDS
 - 4. TDS
- 6-25. To display attack information to the pilot, the electro-optical display system uses what type of source?
 - 1. Electronic
 - 2. Light
 - 3. Analog
 - 4. Digital

- 6-26. The electro-optical sight system used by the pilot is the
 - 1. EOD
 - 2. EODU
 - 3. HUD
 - 4. HUDU
- 6-27. Which of the following sources provide(s) aircraft performance data?
 - 1. Bore sight reference
 - 2. Aircraft systems
 - 3. Tactical computer set
 - 4. Aircraft flight sensors
- 6-28. The transparent mirror that displays information to the pilot in the HUD set is called a
 - 1. reflector
 - 2. combiner
 - 3. mirror/reflector
 - 4. windscreen

IN ANSWERING QUESTION 6-29 REFER, TO FIGURE 5-8 IN THE TEXTBOOK.

- 6-29. Which of the following information is/are NOT processed by the signal data processor for the head-up display unit?
 - 1. Bore sight reference
 - 2. Discrete signals
 - 3. Tactical computer input
 - 4. Aircraft flight sensor data
- 6-30. The HUD set signal data processor input receivers operate on which of the following channels at the same time?
 - 1. One and two; three and four
 - 2. One and three; two and four
 - 3. One and four; two and three
 - 4. One, two, three, and four
- 6-31. The identity signal for the HUD set input receivers of the signal data processor consists of how many total bits of data?
 - 1. 24
 - 2. 20
 - 3. 13
 - 4. 10

- What digital computer section of 6-37. What is the purpose of the 6-32. the HUD set signal data processor distributes the clock pulses?
 - 1. Control logic
 - 2. Sequence control
 - 3. Symbol generator
 - 4. Processor counter
- The symbol generator operates in 6-33. three major modes. Each mode is dependent on the other, and all are completed simultaneously.
 - 1. True
 - 2. False
- During the sixth and seventh 6-34. operations of the line mode, what action occurs with respect to the X and Y data?
 - 1. X data is shifted
 - 2. Y data is shifted
 - 3. The X and Y channel rate registers are shifted by the symbol generator
 - 4. The BITE circuits check all data in the X and Y channel rate registers for correctness
- 6-35. The symbol generator samples the
 - 1. To decode information
 - 2. To generate a self-test mode
 - 3. To transfer data to the HUD immediately
 - 4. To transfer data to the HUD when it is ready
- When the circle mode of operation in the symbol generator is being 6-36. used, the circle is drawn (a) in what direction and (b) begins at what point on the CRT?
- 1. (a) Clockwise (b) top
 2. (a) Clockwise (b) bottom
- 3. (a) Counterclockwise (b) top
- 4. (a) Counterclockwise (b) bottom

- bright-up pulse delay in the circle mode of the signal generator?
 - 1. To compensate for the slow response time of the deflection circuits in the HUD
 - 2. To compensate for the fast response time of the deflection circuits in the HUD
 - 3. To turn off the symbol generator
 - 4. To turn on the signal generator
- 6-38. What voltage is applied to the CRT anode of the HUD?
 - 5,000 volts
 - 2. 10,000 volts
 - 3. 15,000 volts
 - 4. 20,000 volts
- 6-39. The electrical power used for the operation of the standby reticle of the HUD is obtained from what source?
 - 1. The high-voltage power supply
 - 2. The low-voltage power supply
 - 3. Outside of the HUD
 - 4. The HUD battery
- HUD busy signal for what reason? 6-40. In the optical module of the HUD, what is the purpose of the autobrilliance sensor?
 - 1. To detect ambient light changes
 - 2. To adjust output voltage level to the sensor
 - 3. To amplify manual brightness input signals from the control panel
 - 4. To detect ambient light changes and amplify output voltage level to the sensor
 - 6-41. At what rate are the symbols drawn on the CRT of the HUD video module?
 - 15 times per second 1.
 - 2. 25 times per second
 - 3. 50 times per second
 - 4. 100 times per second

- What control(s) the symbol 6-42. brightness of the CRT in the HUD?
 - 1. The X and Y bright-up signal
 - 2. The X and Y amplifiers
 - 3. The control grid circuit of the
 - 4. The cathode bias circuit
- 6-43. Which, if any, of the following ordnance information is available to the pilot on the AVA-12 HUD?
 - 1. Armed/unarmed
 - 2. Type of fusing
 - 3. Type of weapon selected
 - 4. None of the above

IN ANSWERING QUESTION 6-44, REFER TO FIGURE 5-9 IN THE TEXTBOOK.

- In the takeoff mode, what is the maximum radar altitude indication?
 - 1. 1,400 ft
 - 2. 1,500 ft
 - 3. 1,600 ft
 - 4. 1,700 ft
- Which of the following is a function of the declutter feature of the AVA-12 HUD?
 - 1. To rearrange the symbols on the
 - 2. To operate the air-to-ground mode
 - symbols from the display
 - 4. To remove all symbols from the display
- The AVA-12 HUD has what total 6-46. number of basic modes of operation?
 - 1. One
 - 2. Two
 - 3. Three
 - 4. Five
- Which of the following information is NOT available to the pilot in the landing mode of the AVA-12 HUD?
 - 1. Radar altitude
 - 2. Target designator
 - 3. Angle-of-attack
 - 4. Vertical descent

- 6-48. On the TDS display, tactical plot data, required to maintain the aircraft position, is limited to what station?
 - 1. Pilot's
 - 2. Copilot's
 - 3. Tactical coordinator's (TACCO'S)
 - 4. Sensor operator's (SENSO's)
 - 6-49. The display generator unit (DGU) sends all data types to all displays.
 - 1. True
 - 2. False
 - 6-50. The data presented on the pilot's display, produced by the GPDC, is controlled by which, if any, of the following systems?
 - 1. GPDC
 - 2. INCOS
 - 3. DGU
 - 4. None of the above
 - 6-51. Which of the following information is NOT available to the COTAC display?
 - 1. Raw radar
 - 2. S/C radar
 - 3. FLIR
 - 4. MAD
- 3. To remove preselected unwanted 6-52. What is the only information presented on the ARU display?
 - 1. FLIR
 - 2. Analog passive acoustic data
 - 3. MAD
 - 4. Raw radar
 - 6-53. A television system has how many total basic elements?
 - 1. One
 - 2. Two
 - 3. Three
 - 4. Four

- pickup devise?
 - 1. Image orthicon
 - 2. Microwave relay link
 - 3. SEC tube
 - 4. Vidicon
- 6-55. What type of scanning is used in television systems?
 - 1. Synchronized
 - 2. Nonsynchronized
 - 3. Horizontal
 - 4. Vertical

IN ANSWERING QUESTION 6-56, REFER TO FIGURE 6-22 IN THE TEXTBOOK.

- In the transmitter, what is added to the electrical picture signal from the camera to make a composite video signal?
 - 1. A sync operator signal
 - 2. A signal from the pickup device
 - 3. A receiver signal
 - 4. A synchronizing signal
- required for one scan of the picture in the television systems in the United States?
 - 1. 1/15 second
 - 2. 1/30 second
 - 3. 1/60 second
 - 4. 1/75 second
- In commercial broadcast television, 6-58. for resolution of the fine detail in the horizontal direction, what 6-64. The kinescope blanking pulse total number of scanning lines are used?
 - 1. 100
 - 2. 275
 - 3. 350
 - 4. 525
- 6-59. Of the following scanning methods, which is the simplest?
 - 1. Interlaced
 - 2. Noninterlaced
 - Vertical
 - 4. Horizontal

- 6-54. Which of the following is NOT a 6-60. Interlaced scanning is used in most television systems for which of the following reasons?
 - 1. To increase flicker
 - 2. To decrease bandwidth by a factor of 2
 - 3. To increase bandwidth by a factor of 2
 - 4. To decrease resolution
 - 6-61. What is the horizontal scanning frequency of commercial broadcast and most CCTV systems?
 - 1. 30 Hz
 - 2. 60 Hz
 - 525 Hz 3.
 - 4. 15,750 Hz
 - 6-62. The standard television signal consists of what total number of elements?
 - 1. One
 - 2. Two
 - 3. Three
 - 4. Four
- 6-57. What total amount of time is 6-63. For commercial television picture information, what is (a) the maximum percentage for black and (b) the minimum percentage for white of the maximum carrier voltage ?
 - 1. (a) 75 (b) 5
 - 2. (a) 65 (b) 5
 - 3. (a) 75 (b) 15
 - 4. (a) 65 (b) 15
 - suppresses the scanning beam during what time?
 - 1. Vertical flyback time only
 - 2. Horizontal flyback time only
 - 3. Vertical and horizontal flyback time

- pulses provides a means of frequency discrimination?

 - Vertical sync pulse
 Horizontal sync pulse
 - 3. Serrated horizontal sync pulse
 - 4. None of the above
- random interlace, no special sync pulses, exhibits which, if any, of 6-72. The tin dioxide contained on the the following undesirable characteristics?
 - 1. Circuit complexity
 - 2. Long-range transmission use only
 - 3. Insufficient resolution
 - 4. None of the above
- What is the video bandwidth of a slow-speed scan television system?
 - 1. 500 Hz to 250 kHZ
 - 2. 750 kHz to 10 MHz
 - 3. 10 MHz to 100 MHz
 - 4. 100 MHz to 10 GHz
- If four dynodes having a gain of 5 6-68. were used in the image orthicon tube, what would the be the gain of the multiplier section?
 - 1. 5
 - 2. 25
 - 3. 125
 - 4. 625
- The polarity of the signal 6-69. developed by the isocon is the same as the polarity of the orthicon.
 - 1. True
 - 2. False
- What is the transparent conductive coating on the inner surface of the vidicon camera tube known as?
 - 1. Signal electrode
 - 2. Signal grid
 - 3. Signal cathode
 - 4. Signal anode

- 6-65. Which, if any, of the following types of picture synchronizing of 6-71. A plumbicon tube with a designation of 67423B has a color response for pulses provides a means of what color?
 - 1. Red
 - 2. Green
 - 3. Blue
 - 4. White

IN ANSWERING QUESTIONS 6-72 AND 6-73, 6-66. A television system that uses REFER TO FIGURE 5-31 IN THE TEXTBOOK.

- faceplate inner surface is what type of semiconductor?
 - 1. N-type
 - 2. P-type
 - 3. PNP-type
 - 4. NPN-type
- 6-73. What type of junction is formed in view B?
 - 1. PNP
 - 2. NPN
 - 3. PN
 - 4. PIN
- 6-74. Which of the following is NOT an application of the SEC tube?
 - 1. Commercial television
 - 2. Extremely low-light
 - 3. High internal amplification
 - 4. Fast response to moving objects
 - 6-75. What is the basic difference between color and monochrome picture tubes?
 - 1. The type of phosphors coating the screen
 - 2. The type of biasing used
 - 3. The cathode circuit
 - 4. The grid circuit
